fit your glasses to you for extended comfort and vision. Seeing clearly is not enough. For many people, reading and hand-eye coordination tasks can be very difficult. The act of sight not only includes one's eyes, but it also includes the neurological activity that processes the visual information. Throwing a ball or skiing down a hill, is a learned activity; to do either well takes practice. Those who do it best are those who started learning at the earliest age. Sight plays an important role in the learning of these activities. Sight is the steering mechanism; it is the main activity that provides feedback regarding what really is happening. We provide Vision Therapy to help individuals learn how to process visual information and develop better hand-eye coordination skills.

Highland Optometrics

We know your vision is important to you – and it's important to us. When you come for your appointment, we make sure to schedule ample time for your appointment so you will never feel rushed. Our office provides complete eye care for both adults and children. Our comprehensive eye examinations will check your eyes inside and out for any potential eye disorders or diseases. Your visual skills and abilities are carefully evaluated and appropriate treatment is prescribed, whether it's medication, lenses, or vision therapy. We are prepared to handle whatever your eye care needs are, and will treat them with the latest in diagnostic equipment and are committed to keeping up with eye care technology. Our professionals can help fit you into a pair of lenses that is just right for you. We are experts in fitting contact lenses and can handle the most difficult of prescriptions.

If you have allergies, then you know allergies can be particularly annoying to contact lens wearers. In the past many people had to quit wearing their lenses during the allergy season. However, new lens materials and allergy medications have made it possible for these people to eliminate the burning itchy eyes associated with allergies. Prescription medications such as Patanol and Alocril are amazingly effective and safe even in children as young as three. Let us know when you come in for your appointment if you have special allergy needs and we will be happy to help you. Our optical laboratory has the latest in equipment to not only fabricate your glasses, but to maintain and repair them should they become broken or damaged. We are able to tint, coat, harden and edge spectacle lenses. We are able to provide you with any frame or lens design available. Our highly qualified optician and staff are able to adjust and
